

SMART ELECTRICITY METERS

EMDX³ SUSTAINABLE SAVINGS FOR YOUR INSTALLATIONS

→ CATALOGUE PAGES INSIDE

THE GLOBAL SPECIALIST IN ELECTRICAL AND
DIGITAL BUILDING INFRASTRUCTURES

Lasting savings for your installations

Living conditions and comfort can be improved by developing solutions that optimise energy efficiency.

Given that buildings account for 40% of electricity consumption and 20% of CO2 emissions, cutting energy consumption in buildings is a major issue in the fight against climate change.

The aim is for every user to reduce their bill, as well as their energy footprint and metering is the first step in making lasting savings and the basis of any diagnostics.

Thanks to the new range of EMDX³ electricity meters, multi-function measuring units, the CX³ EMS system or the DMX³ and DPX³ MCCBs incorporating measurement functions, Legrand has developed a smart infrastructure for displaying information on active and reactive power consumption, voltage disturbance, harmonic distortion, etc. according to the type of building.

EMDX³ MEASUREMENT CONTROL UNITS

REAL SYNERGY WITH EMDX³ MULTI-FUNCTION MEASURING UNITS

EMDX³ multi-function measuring units record the energy consumed by the various circuits, measure the electrical values (current, voltage, power, etc) or analogue values (temperature) to check the installation is working properly. They monitor energy quality by analysing harmonics and measuring the reactive energy.

They also communicate the values measured to supervision or energy management systems, in order to optimise the consumption and energy quality of electrical circuits in commercial and industrial environments.

In accordance with its policy of continual improvement, the company reserves the right to modify the characteristics and design of its products without warning. All illustrations, descriptions, dimensions, and weights indicated in this catalogue are given as a guide only and the company cannot be held liable for their accuracy.

Measurement is the basis of all diagnostics

By measuring your electricity consumption, you can:

- become more aware of your consumption
- adopt a constant operating regime to smooth out consumption over time
- identify potential savings and implement actions and solutions to cut your consumption.

Thanks to the new range of EMDX³ electricity meters and our supervision solutions, it is possible to analyse consumption data and improve processes. It is also possible to manage multi-site electrical installations remotely or locally using a smartphone, tablet, or a PC.

EMDX³ THREE-PHASE METER

EU DIRECTIVE 2012/27/EU

The European Energy Efficiency Directive 2012/27/EU dated 25 October 2012 imposes an obligation on large companies to conduct an energy audit, which should be repeated every 4 years. The energy audit should be conducted based on the energy performance of the building(s) concerned. To do this, all significant energy use should be identified in order to define opportunities for improvement. An energy inventory is conducted based on an assessment of consumption and identification of usage (by category).

Schematic diagram of an installation:

An installation can record several meters and measurement control units, connected on a Modbus network. The RS 485/IP communication interface and web servers can be used for remote control.

The pulse concentrator can collect measurements from 12 of the pulse electricity meters and send the information over the Modbus network using the RS 485 output.

A range suitable for a variety of uses

The new EMDX³ electricity meters measure and display values such as: total active energy, total reactive energy, partial active energy, active power, reactive power, apparent power, average active power, the maximum value of

the average active power, current, voltage, frequency, the power factor, the running time (per tariff) per single-phase or three-phase circuit downstream of the electricity supply company's metering.

EXAMPLE OF A PHOTOVOLTAIC INSTALLATION

A MULTIMETERING MID-CERTIFIED RANGE

Possibility of bi-directional metering of active and reactive energy consumed/produced (Ea+ and Ea-/Er+ and Er-) which makes them particularly suitable for buildings equipped with a power plant (photovoltaic, wind).

MID certification ensures accuracy of the metering with a view to charging out the electricity consumed or produced.

A meter should be selected according to the network (single-phase or three-phase) and its maximum current, required displayed values and communication type allowing it to be run by a supervision system.

Conforming to standards IEC 61557-12, IEC 62053-21/23, IEC 62052-11, IEC 62052-31, EN 50470-1/3 (for the MID version)

	Cat.No	I _{max} (A)	Width (number of modules)	Non-MID	MID	Output		Dual-rate	1 pulsed input
						Modbus (RS 485)	Pulse		
 Single-phase Direct connection	0 046 70	32	1	x			x		
	4 120 68	45	1	x		x

	4 120 42	5	4		x		x		x
	4 120 43	5	4		x	x		o	o

 New range

x Built-in

o 2 options: dual-rate or 1 pulse input for other meters (gas, water, etc)

The dual-rate function allows energy consumption to be measured during different time slots (peak period, off-peak period) or record energy use from two different sources (normal or backup) with a single meter.

An intuitive system that is easy to use

WEB SERVERS

EMDX³ electricity meters can be used to display consumption locally, in the distribution board or remotely via the internet. They have two types of output that allow them to be integrated in a smart system: RS 485 Modbus or pulse.

The communication function makes it possible to:

- centralise consumption
- reproduce electrical values remotely via web servers.

TWO TYPES OF WEB SERVER DEPENDING ON THE SIZE OF THE INSTALLATION

Web servers can be used to display consumption on any type of screen equipped with a web browser: PC, smartphone, tablet, for installations with up to 255 Modbus addresses or pulse meters.

Intuitive browsing

Browsing through menus to display the measured values happens intuitively, using just two buttons. It's quick and easy to preview the configuration settings, without needing to go into the configuration menu.

- 1** Current menu (whose pages are displayed on-screen)
- 2** Next menu, accessible by pressing the corresponding button
- 3** Scroll bar indicating progress through the pages displayed

- 4** Removable terminal blocks:
 - input for dual-tariff energy metering
 - pulse output or Modbus connection

- 5** Metrology LED
- 6** Function button, which can be used to browse between the various page menus (located at the top of the screen):
 - E (energy), PQS (powers) and IU (current and voltage)
- 7** Dual-function button:
 - quick press → pages scroll through the current menu (indicated at the top of the screen)
 - press for 3 sec. → activates configuration mode
- 8** Technical marking:
 - Please consult the user manual before continuing with installation.
 - Double insulation
 - Activation on 3-wire three-phase line
 - Activation on 4-wire three-phase line
 - Anti-rotation (antidimintion)

Simplified installation and connection

The phase and neutral terminals have the same dimensions and are offset to make wiring easier.

Three-phase meters can be used to display phase sequences to ensure they are connected correctly.

All the meters have a built-in 120 Ohm termination resistor on the RS 485 line, which can be configured in programming mode.

Clear marking indicating the terminal position and wiring direction.

Sealed terminal shield to prevent unauthorised access.

EMDX³ electrical energy meters

┌ rail mounting

Technical characteristics p. 13

Measure the electricity consumed by a single-phase or three-phase circuit downstream of the electricity distribution metering. Display electricity consumption in kWh, as well as other values such as current, active energy, reactive energy and power (depending on the catalogue number). Conform to standards IEC 61557-12, IEC 62053-21/23, IEC 62052-11 and IEC 62052-31. MID compliance ensures accuracy of the metering with a view to recharging for the electricity used.

EMDX³ electrical energy meters

└ rail mounting

Technical characteristics

Conform to IEC 61557-12

Active energy accuracy: Class 1 (EN 62053-21)
Class B (EN 50470-1,3) - for MID version

Reactive energy accuracy: Class 2 (EN 62053-23)

Single-phase meters:

Reference voltage Un: 230 V-240 V
Reference frequency: 50-60 Hz

Cat.Nos 0 046 70, 4 120 68/69

LCD display: 7 digits
Resolution: 0.1 kWh
Maximum indication: 99999.9 kWh

Cat.Nos 4 120 80/81/82/83

LCD graphic display: 9 digits
Resolution: 0.01 kWh
Maximum indication: 9999999.99 kWh

Three-phase meters:

Reference voltage Un: single phase 230 V-240 V
three-phase 230 (400) - 240 (415) V

Reference frequency: 50-60 Hz

Cat.Nos 4 120 40/41/42/43/91/92/93

LCD graphic display: 9 digits
Resolution: 0.01 kWh
Maximum indication: 9999999.99 kWh

Cat.Nos 4 120 74/75

LCD display: 8 digits
Resolution: 0.01 kWh
Maximum indication: 999999.99 kWh

Interfacing with IP communication network

For direct connection meters, if connected via transformers, the resolution and maximum indication depend on the transformation ratios of these transformers

EMDX³ multi-function measuring units

Electrical energy metering

Metering devices on rail

Technical characteristics

Analogue ammeters

Type of measurement	Analogue	
	Ferromagnetic	
Frequency	50 to 60 Hz	
Precision	1.5 %	
Operating temperature	- 10 °C to + 40 °C	
Storage temperature	- 20 °C to + 80 °C	
Consumption:		
• voltage circuit	-	
• measurement circuit	1.1 VA	
Connection capacity	Direct 6 mm ²	Par TI 4 mm ²
Conformity to standards	NF EN 61010-1	

Analogue Voltmeters

Type of measurement	Analogue	
	Ferromagnetic integration	
Frequency	50 to 60 Hz	
Precision	1.5 %	
Operating temperature	- 10 °C to + 40 °C	
Storage temperature	- 20 °C to + 80 °C	
Consumption	3 VA	
Connection capacity	2 x 2.5 mm ²	
Conformity to standards	NF EN 61010-1	

Digital frequency meter

Type of measurement	Quartz electronic
Precision	± 0.2 % for ± 1 digit
Operating temperature	- 10 °C to + 40 °C
Storage temperature	- 20 °C to + 70 °C
Consumption	4.5 VA
Connection capacity	2 x 2.5 mm ²
Conformity to standards	NF EN 61010-1

Analogue metering devices on door

Technical characteristics

Frequency: 50/60 Hz
 Precision class: 1.5 %
 Operating temperature: - 10 °C to + 40 °C
 Storage temperature: - 20 °C to + 80 °C
 Consumption:
 - ammeter: 1.1 VA
 - voltmeter: 3 VA
 Connection capacity: 2 x 2.5 mm² with screws or
 Conform to IEC 60051, VDE 0410, BS 89,
 EN 60051-1, cenelec HD 223
